		Date	Aug 26
Counterfeit Parts Prevention Policy		Issue No.	7
		Issued By	MS / NC

At Castings Technology International Ltd, we are committed to preventing the introduction of counterfeit or suspect counterfeit parts, materials and products into our manufacturing processes and supply chain. Protecting product integrity and ensuring the delivery of safe, conforming products is fundamental to maintaining the trust of our customers and supporting the aerospace and defence industries.

Counterfeit parts, materials or products are those that are intentionally misrepresented with respect to their identity, origin, traceability, certification or performance.

To minimise the risk of counterfeit products entering our business, we are committed to:

- Procuring materials, components and services from approved and trusted suppliers.
- Verifying purchased products through appropriate inspection, certification review, traceability and, where applicable, testing.
- Maintaining full material and product traceability throughout the manufacturing process.
- Applying risk-based controls appropriate to the product, supplier and customer requirements.
- Ensuring personnel are aware of counterfeit part risks and their responsibilities for identifying and reporting suspect counterfeit products.
- Investigating any suspected counterfeit parts, materials or products promptly and taking appropriate containment and corrective action.

Any suspected counterfeit or suspect counterfeit parts, materials or products shall be immediately identified, segregated and quarantined to prevent unintended use or delivery. Where appropriate, Castings Technology International Ltd will notify the customer, supplier and relevant regulatory or enforcement authorities, conduct a full investigation, and implement corrective actions to prevent recurrence.

Preventing counterfeit parts is the responsibility of every employee. Management is committed to providing the resources, training and oversight necessary to ensure the integrity of our products, the effectiveness of our Quality Management System, and compliance with BS EN 9100, customer requirements and applicable statutory and regulatory obligations.
